“The student doesn’t ask ‘does the patient have a pulse?’ or ‘are they breathing?’ They can see and hear the METI breathing and feel a pulse. This is much more realistic. In addition, when the participant administers a medication, the changes made to heart rate and blood pressure occur over the appropriate amount of time, which adds much more realism.”

Come and practice your skills on one of the most sophisticated training simulators on the market. Practice skills such as:

RSI, IO, Needle Decompression, Needle/Surgical Cricothyrotomy and many others on a difficult Medical or Trauma Patient
